## C语言综合研究与高强度程序设计训练9

写一个函数, showstr(char...),打印多个字符串,它可以接收不定数量的char型参数,最后一个参数可传入0, showstr 通过此可以识别何时停止打印,返回例子,调用 showstr 在屏幕上打印字符串 "This is program"."Welcome to"Helloworld!"

• a.c

```
void showstr(char *, ...);
char *p1 = "This is a c program.";
char *p2 = "Welcome to c !";
char *p3 = "Hello world !";
int i = 0;
main() { showstr(p1, p2, p3, 0); }
void showstr(char *str, ...) {
    for (i = 0; (*(int *)(_BP + 4 + i)) != 0; i += 2) {
        printf("%s\n", *(int *)(_BP + 4 + i));
}
```

• 运行结果

```
C:>>>SRCNINE\A.EXE
This is a c program.
Welcome to c !
Hello world !
```
